

IEEE 13-Node Test Feeder (Modified Reconstruction)

Radial distribution with two transformers (T1: Yg-Δ, T2: Δ-Δ) · Single-Line Diagram

SourceBus → T1 (Yg-Δ) → 650 → 632, feeding the 671 backbone (→675, →684→{611,652}) plus two laterals off 632: 632→645→646, and 632→633→T2 (Δ-Δ)→634. T1/T2's floating Δ windings are this project's documented source of Jacobian rank-deficiency (docs/project_guide.tex §6). Bus 670 is folded into segment 632-671 and dead-end bus 680 is omitted -- schematic simplifications, not topology changes.
